HDOC DAY-75

Q1. Assign explicit values starting from 10 in an enumeration and print them.

Aim

To write a C program to assign values starting from 10 using enumeration and display them.

Algorithm

1. Start the program.
2. Declare an enumeration with A = 10, B, C.
3. The remaining values are automatically assigned as 11 and 12.
4. Print the values of A, B, and C.
5. Stop the program.

>C PROGRAM:

```
#include <stdio.h>

enum Numbers {
   A = 10,
   B,
   C
};

int main() {
   printf("A=%d, B=%d, C=%d", A, B, C);
   return 0;
}
```

>INPUT:

Nil

>OUTPUT:
A=10, B=11, C=12

Result

Thus, the C program to assign and print enumeration values was executed successfully.

Q2. Use enumeration to represent menu choices (ADD, SUBTRACT, MULTIPLY) and perform operations using switch.

Aim

To write a C program using enumeration and a switch statement to perform arithmetic operations.

Algorithm

1. Start the program.
2. Declare an enumeration with ADD, SUBTRACT, and MULTIPLY.
3. Read the operation and two numbers from the user.
4. Identify the operation using a switch statement.
5. Perform addition, subtraction, or multiplication.
6. Display the result.
7. Stop the program.

>C PROGRAM:

```
#include <stdio.h>
#include <string.h>

enum Operation {
   ADD,
   SUBTRACT,
   MULTIPLY
};

int main() {
   char choice[20];
   int a, b, op;

   scanf("%19s %d %d", choice, &a, &b);

   if (strcmp(choice, "ADD") == 0)
      op = ADD;
   else if (strcmp(choice, "SUBTRACT") == 0)
      op = SUBTRACT;
```

```
    else if (strcmp(choice, "MULTIPLY") == 0)
        op = MULTIPLY;
    else {
        printf("Invalid choice");
        return 0;
    }

    switch (op) {
        case ADD:
            printf("%d", a + b);
            break;

        case SUBTRACT:
            printf("%d", a - b);
            break;

        case MULTIPLY:
            printf("%d", a * b);
            break;
    }

    return 0;
}
```

>INPUT

ADD 10 20

>OUTPUT:
30

Result

Thus, the C program to perform arithmetic operations using enumeration and switch was executed successfully.
