HDOC DAY-48

NAME-PRIYADARSHNA

SAPID-59032928

BATCH-15

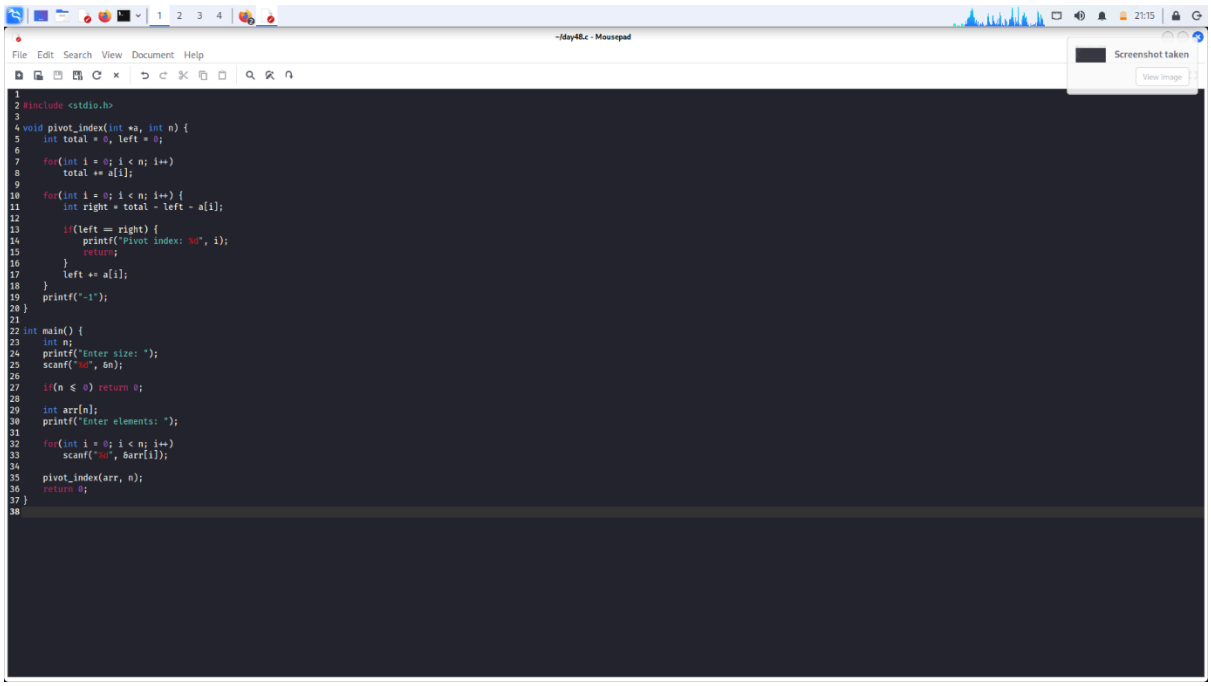

Aim

To write a C program to find the leftmost pivot index of an array using pointers and a user-defined function.

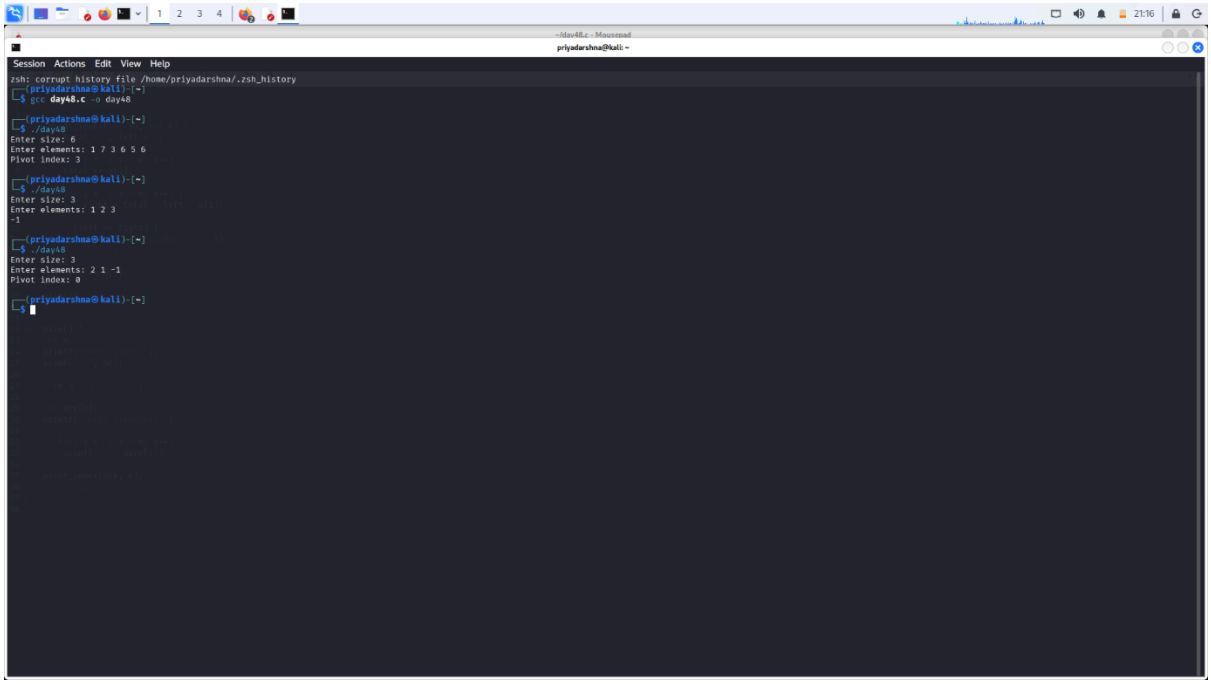

Algorithm

1. Start.
2. Read array size n and elements.
3. Pass array address to pivot_index().
4. Calculate total sum.
5. Calculate right = total - left - a[i].
6. If left == right, print index and return.
7. Otherwise, update left sum.
8. Print -1 if no pivot exists.
9. Stop.
